Full-Stack Web Developer

Absolute Exhibits - Tustin, CA

Front-end and back-end development, hands on coding, develop, update and maintain multiple responsive websites and web applications. I would be interested in this job as it involves all aspects of development.

Front End Developer W/ REACT

Ledgent Technology & Engineering - Irvine, CA

Develop websites that meet design, functionality and architecture requirements. Develop websites for a variety of screen sizes. Ensure the technical feasibility of proposed UI/UX designs. I would also like this opportunity as it involves design and coding.

Web Developer

Corporate Enterprises Services - Newport Beach, CA

This position will be joining a web development team to create and maintain our internal websites. This position will coordinate website improvements, updates, and functionality. A balance of creativity and analytical thinking is a must, and the job requires exceptional computer skills and web technology experience, as this will be a hands-on job. I would like this job since it involves internal websites which sounds like a different opportunity than other coding jobs.

I look up to Mike, not only has he been a web developer he also has a great youtube channel that provides a great resource of knowledge. I am a member to his service and I only have rave review of his content.
